EDUCATION

Adelaide University

Graduating Nov 2026

Honours Degree of Computer Science

GRADE (GPA): 6.2 / 7

AWARDS: Aurizn Artificial Intelligence Ingenuity Prize, Innovative Software Engineering Award

The University of Adelaide

Graduated Dec 2024

Bachelor of Computer Science (Advanced), Major in Artificial Intelligence

GRADE (GPA): 6.4 / 7

AWARDS: Business School Award for Personal & Professional Development

Pembroke School

Graduated Dec 2021

South Australian Certificate of Education

GRADE (ATAR): 99.95 / 99.95

AWARDS: Subject Merit in Research Project

EXPERIENCE

Insight Factory AI

Adelaide, SA

Data & AI Engineer

Mar 2024 – Nov 2025

- Working in agile process to iteratively engage with multinational client teams to develop, test and deliver software.
- Developed and deployed an automated email response tool for a multinational client, using a RAG based approach with OpenAI API, achieved by sourcing similar historical responses from a secure local vectorized database.
- Supported data migration effort by adapting client's old data engineering stored procedures, to instead run on Databricks SQL and the Insight Factory platform.

Australian Institute for Machine Learning

Adelaide, SA

Machine Learning Researcher

Jun 2023 – Present

- Developed a music production plugin which uses generative AI to generate, extend, replace and infill audio clips guided by natural language in industry-standard software such as Ableton-Live and Logic Pro.
- Created a model with 3D structural reasoning by using custom designed tokenizer and GPT-2 based transformer, which was trained on LDraw files to facilitate reconstruction and creation of new LEGO assemblies.
- Recipient of AIML Industrial AI Program Honours Scholarship (2025).

The University of Adelaide

Adelaide, SA

Workshop Tutor

Feb 2025 – Nov 2025

- Led weekly university workshop sessions for the course Problem Solving & Software Development, helping students understand and solve algorithm and data structure problems.

OTHER PROJECTS

Surveillance App – Mobile Wireless Distributed System | Flutter, CV, Raspberry Pi, System Networking

2025

- Developed a Flutter mobile app to control a distributed tracking system of Raspberry Pi cameras, optimizing performance with careful widget management and on device inference with the YOLO-v8 family of CV models.
- Users had ability to set security alerts when certain faces were detected, or spaces became too crowded.

Rail Road Break Prediction – Machine Learning Pipeline | SQL, Pandas, NumPy, Scikit-learn, PyTorch, TensorFlow

2024

- Built a machine learning pipeline with distinct configurable stages to prepare the multidimensional data (cleaning, feature engineering, feature selection), which is then used in model training and inference.
- This iterative and configurable approach uncovered rapid insights into how hyper parameters values and data engineering techniques influenced the performance of classification models (Random Forest, MLP, LSTM).

EXTRACURRICULAR ACTIVITIES

Competitive Programming Club – Committee Member 2023-2024

Dec 2022 – Present

- Organisation and participation in competitions (such as ICPC), where groups of three compete to solve the most algorithm and data structure problems.

Computer Science Club

Jan 2023 – Present

- Keeping up to date in the world of computer science with industry talks and meets.
